KT1044 CommandCat® Communication System

HOT ZONE COMMUNICATIONS • TECHNICAL REFERENCE CENTER

HOT ZONE FIRST RESPONDERS COMMUNICATING WITH THE TECHNICAL REFERENCE CENTER

HazTech's KT 1044 advanced transmission system with encrypted 802.11 communication software installed in rugged Pelican® cases. The system contains the "Hot Zone" station and the "Technical Reference Center" station, both stations talk to each other - live time - up to one mile apart. The Hot Zone software highlights the Algorithm First Response path and records the testing data and Biological MicroCat® images, then transmits this information to the Technical Response station.

The Technical Reference Center station receives all of the testing data from the Hot Zone station, saves all the information, and can produce a chronological report of the incident. The data and Microscope images are downloaded into the satellite port for transmission to anyone, countrywide, in seconds.
